## GOVERNOR LINE PRESSURE REGULATORS

Pietro Fiorentini's GOVERNOR line of gas regulators are designed to comply with the latest CSA and international standards for regulators suitable for indoor and outdoor installations with no modifications.

The GOVERNOR family of regulators are ideal for a wide range of residential through large industrial applications. The materials and soft parts used in the construction of the GOVERNOR regulators make them suitable for use with natural gas, LPG, Propane air and other non-corrosive gases.

All GOVERNOR regulators are equipped with balanced valve design for improved high outlet pressure accuracy regardless of Inlet pressure variation. The double diaphragm with integral vent limiter provides added security. The external vent limiter reduces piping costs and the need for costly vent piping for indoor installations and complies with CSA guidelines.\*\* The number of high capacities and regulator options sometimes eliminates the need for separate units and significantly reduces installation costs.

### SAFE, RELIABLE AND HIGH PERFORMANCE

## APPLICATION NOTES

1. The GOVERNOR regulator is ANSI Z21.80A-2019 / CSA 6.22A-2019 and ANSI Z21.18B-2019 / CSA 6.3B-2019 certified for vent limited installations (indoor installations where a vent line is not required), depending upon local codes and standards. Per the terminology of the standard, there is no “vent less regulator”, they are vent limited because they can leak up to 2.5 cu. ft. per hr. (1 cu. ft. per hr. for propane gas). The regulators can be installed per code without installing a vent line, but are technically termed “vent limited” per the standard, not vent less.
2. The tables listed are guidelines in capacity. The actual capacity can differ based on inlet and outlet piping, type of equipment installed and differential flow pressure of the system.
3. The GOVERNOR is a bubble tight full lockup regulator (it will not leak gas downstream when it shuts off). Lock up of the GOVERNOR is certified to ANSI Z21.80A-2019 / CSA 6.22A-2019 and ANSI Z21.18B-2019 / CSA 6.3B-2019 standard. Lock up in any given installation can vary based on, piping, snap acting gas valves on high efficiency equipment, firing rate at the time of equipment shut off, debris in the line, temperature, as well as many other variables. You may see variations in lock up in some installations due to the above. Pietro Fiorentini will not guarantee the lock up will meet your equipment requirement due to these variations in installations and piping.
4. The low-capacity GOVERNORS 3/8" - 1" are intended for use on equipment such as unit heaters or simple on/off furnace applications single load.
5. Use the high-capacity GOVERNORS on all “High Efficiency” quick acting gas valve applications, such as generators, pool heaters, or high turn down boilers. Install a regulator on each individual piece of equipment. Size the regulator at minimum 50% to 100% of listed capacity to minimize high lock-up.
6. Try to match the GOVERNOR regulator to the pipe size of the equipment and minimize pressure drop between the regulator and equipment to 1" W.C.. Minimize the amount of elbows and fittings between the regulator and the equipment and use full port ball valves not plug valves or reduced port valves.
7. Be careful on applications where you increase the outlet piping more than 1 diameter. You may need to install an external control line in the larger piping. The GOVERNOR can be ordered with or retrofitted with an external control line except low-capacity models.
8. On all installations, make sure you don't install the regulator directly at the equipment. Install the regulator 3 to 10 feet away depending on the application.
9. Never install the external brass vent limiter outdoors. For outdoor installations, install appropriate vent protection.
10. If there are ever any questions on the installation or application of the Governor regulator, immediately contact your local authorized distributor or representative.
11. The maximum inlet pressure on the regulator label is the required maximum pressure of the ANSI Z21.80A-2012 / CSA 6.22A-2012 (R2016) and ANSI Z21.18B-2012 / CSA 6.3B-2012 (R2017) rating. It is not always the maximum allowable operating inlet pressure of the regulator. The rating is a CSA requirement.
